

CHILLFI

Tester QA Checklist

Screen-by-screen, feature-by-feature sign-off — Mobile App, Website & Admin Panel

How to use this checklist

1. Open every screen listed. Use the exact steps in “What to check” as a minimum — go further if you notice anything else that looks or feels wrong.
2. Mark Result: Pass, Fail, or N/A (could not be reached / not applicable to this build).
3. If you mark Fail, set a Severity and write what went wrong in Notes — be specific: what you tapped, what you expected, what actually happened, and on which device / OS.
4. Take a screenshot for anything you mark Fail and name it so it can be matched back to the row number in this PDF (e.g. “#36 - wrong total shown.png”).
5. This PDF is fillable — open it in Adobe Acrobat Reader or a PDF app that supports form filling (typing directly into a phone or web browser’s built-in PDF viewer may not save your answers — use a dedicated PDF reader/editor app).
6. Fill in your name, device and date on the last page and return the completed PDF.

Severity guide

Critical	Blocks the core flow, loses/corrupts data, charges the wrong amount, or is a safety/privacy issue.
High	A real feature is broken or shows wrong information, but there is a workaround.
Medium	Annoying or confusing, but does not block completing the task.
Low	Cosmetic: spacing, wording, alignment, minor visual issues.

Module summary

Auth & Onboarding (Mobile App): 12 · Home & Discovery (Mobile App): 12 · Product (Mobile App): 6 · Cart & Checkout (Mobile App): 11
Orders (Mobile App): 4 · Profile (Mobile App): 9 · Notifications (Mobile App): 2 · Extra States (Mobile App): 3 · Website — Storefront: 17
Admin Panel — Auth & Dashboard: 2 · Admin — Catalog: 6 · Admin — Orders & Users: 5 · Admin — Moderation & Support: 3 · Admin —
Total: 96 screens across 14 sections.

Tester name

Claude (AI QA Agent)

Device / OS

iPhone 17 Pro Simulator, iOS 26.5 (mc

Date started

13 Sep 2026

App build / version

chillfi 1.0.1+2 (debug, iOS Simulator build)

Platform tested (iOS / Android / Web)

iOS (Simulator) + Website + Admin Panel

Auth & Onboarding (Mobile App)					
#	Screen	What to check	Result	Severity	Notes / bugs found
1	Splash Screen splash	App opens directly to the ChillFi splash with no blank white screen, then moves to Onboarding/Welcome within a few seconds. (On iOS specifically, a missing/misconfigured Firebase config can leave the whole app permanently blank -- confirm this never happens.)	• Pass ◦ Fail ◦ N/A	-	Was P0 BLOCKER before fix: unhandled Firebase.initializeApp() exception crashed main() before runApp(), app was permanently blank on iOS. Fixed (BUG-010) to degrade gracefully. Retested: app launches smoothly.
2	Onboarding Screen 1 onboarding-1	"Experience Premium Shopping" slide renders correctly, Skip is visible top-right, swipe or Next advances to slide 2.	• Pass ◦ Fail ◦ N/A	-	Verified live on iPhone 17 Pro simulator. Renders correctly, Skip visible, advances to slide 2.
3	Onboarding Screen 2 onboarding-2	"Everything You Need, All in One Place" slide renders correctly, dot indicator shows position 2 of 3.	• Pass ◦ Fail ◦ N/A	-	Verified live. Dot indicator correct at position 2 of 3.
4	Onboarding Screen 3 onboarding-3	"Track Your Orders, Stay Updated" slide renders correctly, button changes to "Get Started" on the last slide.	• Pass ◦ Fail ◦ N/A	-	Verified live. Button correctly changes to Get Started on last slide.
5	Welcome Screen welcome	Get Started / Login-Signup / Continue as Guest all present and tappable. Onboarding must not reappear on a later app launch (first-launch-only).	• Pass ◦ Fail ◦ N/A	-	Verified live. Get Started / Login-Signup / Continue as Guest all present and functional. Onboarding correctly does not re-show on relaunch.
6	Login Screen login	Mobile number field accepts digits only, capped at 10; +91 code fixed. Send OTP, Forgot Password, and Sign Up links all work. The "English" language selector is currently decorative only -- confirm it does not appear to silently fail when tapped (app is English-only by design).	• Pass ◦ Fail ◦ N/A	-	Mobile number field takes focus and accepts input correctly (verified live). NOTE: mobile login calls Firebase Phone Auth directly (auth.verifyPhoneFirebase), NOT the backend /api/auth/send-otp endpoint -- so it depends on real iOS Firebase.
7	OTP Verification Screen otp-verification	6-digit OTP input, resend timer counts down correctly, wrong OTP shows a clear error, correct OTP logs in and lands on Home.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED. Requires completing OTP send on the previous screen, which requires real Firebase iOS config (not present). Cannot proceed past Login with a real phone.
8	Signup Screen signup	Name / phone / OTP fields required; signing up with an already-registered phone number shows "already registered" rather than creating a duplicate account.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED, same reason as OTP Verification (Firebase iOS config required).
9	Forgot Password Screen forgot-password	Entering a registered phone sends an OTP; an unregistered phone shows "No account found" rather than silently proceeding.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED, same reason (Forgot Password also sends an OTP via the same Firebase flow).
10	Reset Password Screen reset-password	New password + confirm fields; mismatch and under-length passwords are rejected with a clear message before submit.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED, same reason (only reachable after a successful OTP step).
11	Location Permission Screen location-permission	Clearly explains why location is requested. Denying permission must not crash the app or block browsing/search.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED. Only reachable after signup/login completes, which is blocked by the Firebase config gap above.
12	Notification Permission Screen notification-permission	Clearly explains why push notifications are requested. Denying must not block using the rest of the app.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- BLOCKED, same reason.

Home & Discovery (Mobile App)					
#	Screen	What to check	Result	Severity	Notes / bugs found
13	Home Dashboard home-dashboard	Banner carousel, quick-action icons, categories, flash-deals countdown, and the rewards/offer cards all load with real data. A long banner title (e.g. "Monsoon Sale -- Up to 70% Off") must display in full, never hidden behind the product image.	- Pass - Fail - N/A	-	Verified live: banners, quick actions, categories, rewards/offer cards all load with real data. BUG-011 (banner text hidden behind image) found and fixed -- confirmed 'Monsoon Sale -- Up to 70% Off' now displays in full.
14	Search Screen search	Typing shows live product suggestions; recent searches and trending searches lists both populate and are tappable.	- Pass - Fail - N/A	-	Verified live: typed 'phone', got real substring/semantic matches from the backend (e.g. Sony headphones, boAt Rockerz matched via description text, not just product name). Trending
15	Voice Search Screen voice-search	Tapping the mic opens voice input and a spoken phrase correctly becomes the search query. Requires a real device -- simulator/emulator microphones are unreliable.	- Pass - Fail - N/A	-	UNTESTED -- REAL DEVICE REQUIRED. Simulator microphone input is not reliable/available for this kind of test.
16	Categories Screen categories	Grid of top-level categories with icons; tapping opens the correct Sub Categories or Product Listing.	- Pass - Fail - N/A	-	Verified live: grid of categories with real live product counts per category (7/8/2/4/1/0/0), matches backend exactly.
17	Sub Categories Screen sub-categories	Shows the real subcategories for the parent category actually selected, not a fixed/hardcoded list.	- Pass - Fail - N/A	-	Verified indirectly via Categories -> Smartphones filter, which correctly showed only smartphone products. Dedicated Sub Categories screen (for categories that have children) not
18	Brand Listing Screen brand-listing	All active brands shown with logo and live product count; tapping a brand correctly filters Product Listing.	- Pass - Fail - N/A	-	Not opened as a dedicated screen this pass, but brand filtering was verified working correctly via Product Listing's brand chips (All/Apple/OnePlus/Samsung) and via
19	Flash Deals Screen flash-deals	Countdown timer is live and accurate; discounted prices match what's shown on Product Details for the same item.	- Pass - Fail - N/A	-	Verified live via Home 'Deal of the Day' and website Flash Sale section: countdown timer present, discounted prices match Product Details for the same items.
20	Trending Products Screen trending-products	Products shown reflect the backend's actual trending/rating data, not a fixed static list -- confirm it changes as ratings/sales change.	- Pass - Fail - N/A	-	Verified live: 'Trending Products' screen shows real photos, correct ratings/review counts (e.g. boAt Airdopes 4.3/52.0k, Noise ColorFit Ultra 3 4.4/28.0k) matching backend data
21	Offer Products Screen offer-products	Only products with a genuinely active offer/coupon appear; expired offers should not still be listed here.	- Pass - Fail - N/A	-	Verified via backend API (/api/products/flash-sale, offers) and website Offers page (showed exactly 4 active coupons, matching admin panel's live count) -- only currently-active offers
22	New Arrivals Screen new-arrivals	Sorted newest-first; adding a new product in Admin should make it appear here.	- Pass - Fail - N/A	-	Verified live: 'New Arrivals' screen renders correctly with banner, filter chips, and product grid. Noticed the bottom nav 'Orders' tab stays highlighted even while on New
23	Recently Viewed Screen recently-viewed	Reflects only products this specific account actually opened, most-recent-first; correct empty state before any product has been viewed.	- Pass - Fail - N/A	-	Verified backend logic only this pass (recently_viewed table, correct most-recent-first ordering, empty state before any views) -- confirmed via earlier API testing in this engagement:
24	Recommended Products Screen recommended-products	Works for guests (generic recommendations) and for logged-in users (personalized from recently-viewed categories) -- guests must not be blocked from this section.	- Pass - Fail - N/A	-	BUG-006 found & fixed earlier this engagement: this endpoint incorrectly required login despite being designed for guests too. Retested: guests, logged-in users, and invalid tokens all

Product (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
25	Product Listing Screen product-listing	Category/brand/price filters and price/rating/newest sort all actually narrow and reorder results; filters can be cleared back to the full list.	- Pass - Fail - N/A	-	Verified live: category/brand filter chips and 'Sort by: Popular' dropdown present and functional on Product Listing; backend confirmed to correctly narrow results by category/brand/price
26	Product Details Screen product-details	Price, discount %, rating, and stock count are correct. The "You may also like" section shows properly comma-formatted prices (e.g. Rs. 24,999), never a raw decimal like Rs. 24999.00, and text never overflows behind images.	- Pass - Fail - N/A	-	Verified live: Samsung Galaxy S24 FE PDP shows correct price/discount/rating(4.7)/review count(12400)/stock(141), badges (Best Seller, -27% OFF), image gallery with thumbnails, Add to Cart/Buy Now/Get cheapest all present
27	Product Image Gallery product-gallery	Swipe between images and pinch-to-zoom both work; every image actually loads (no broken-image icons).	- Pass - Fail - N/A	-	Image gallery with thumbnail strip confirmed present and correctly showing the selected image highlighted; full swipe/pinch-zoom gesture not separately exercised this
28	Similar Products Section similar-products	Related products come from the same category and correctly exclude the product you're currently viewing.	- Pass - Fail - N/A	-	BUG-008 (website) found & fixed earlier this engagement: 'You may also like' prices were unformatted raw decimals; now correctly comma-formatted. Confirmed the equivalent mobile
29	Product Reviews Screen product-reviews	Review list and star-rating breakdown are accurate. Submitting a second review for the same product updates your existing review rather than creating a duplicate.	- Pass - Fail - N/A	-	Verified backend logic earlier this engagement: review list + rating breakdown accurate; submitting a second review for the same product correctly updates the existing one (ON
30	Write / Edit Review write-review	Star rating is required before submit is enabled; title/body fields validate; submitted review appears in the list immediately.	- Pass - Fail - N/A	-	Verified backend + website frontend contract earlier this engagement: rating is required before submit, title/body fields validate, correct field names (rating/title/body) confirmed matching

Cart & Checkout (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
31	Cart Screen cart	Quantity +/- updates subtotal, tax, and delivery fee correctly and immediately. An EMPTY cart must show Rs. 0 total -- never a phantom delivery charge.	- Pass - Fail - N/A	Medium	BUG-015 found & fixed: 'Add to Cart' on Product Details showed ZERO visible feedback (SnackBar hidden behind a hand-rolled Align-positioned bottom bar instead of Scaffold's
32	Empty Cart Screen empty-cart	Friendly empty state with a "Shop Now" call-to-action; layout does not break with 0 items.	- Pass - Fail - N/A	-	Verified live: clean empty-cart state with 'Your cart is empty' + Shop Now CTA, no broken layout.
33	Add Address Screen add-address	All required fields enforced, pincode format validated, and the new address appears in the address list immediately after saving.	- Pass - Fail - N/A	-	Verified backend logic earlier this engagement: required fields enforced, pincode format validated, new address appears in address list immediately after saving (tested via the website
34	Delivery Address Screen delivery-address	Selecting a different saved address updates the delivery fee correctly if pincode-based shipping rules apply.	- Pass - Fail - N/A	-	Verified backend logic earlier this engagement: selecting a different address correctly recalculates delivery fee per pincode-based shipping rules.
35	Apply Coupon Screen apply-coupon	A valid coupon reduces the total by the correct amount; an invalid/expired code shows a clear error; minimum-order-value coupons are rejected below that threshold.	- Pass - Fail - N/A	-	Verified backend logic earlier this engagement: valid coupon reduces total correctly (e.g. WELCOME20 correctly enforced 'already used' on second attempt), invalid/expired code shows a clear error
36	Checkout Screen checkout	CRITICAL SCREEN. The order summary total (subtotal + GST + delivery - discount) shown here must exactly equal what you're actually charged after placing the order. The "Place Order" button must stay disabled/loading until this total has fully loaded -- never let it be tapped while the price is still calculating.	- Pass - Fail - N/A	-	BUG-009 (P1, website) found & fixed earlier this engagement: checkout total shown to the customer could differ from what they were actually charged (race condition + stale server-cart data). Fixed with a request-mutex + button gated on the price summary being loaded. Detected, reviewed, and

#	Screen	What to check	Result	Severity	Notes / bugs found
37	Payment Method Screen payment-method	COD and online payment (PhonePe) are both selectable; choosing one does not silently clear or reset other checkout fields.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED. Requires being logged in to reach Checkout on mobile; blocked by the Firebase iOS login gap. Backend accepts both COD and PhonePe payment method values
38	COD Confirmation Screen cod-confirmation	Clear, explicit confirmation step before a Cash-on-Delivery order is placed.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason (only reachable from Checkout).
39	PhonePe / Razorpay Payment Screen online-payment	In production this must go to the real payment gateway. In dev/test mode a mock/auto-success page is acceptable but must clearly be labelled as a test/dev flow, never presented as a real payment.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason. Backend PhonePe dev-mode mock payment flow was fully verified via direct API + website checkout earlier this engagement (mock success somehow made order Paid)
40	Order Success Screen order-success	Shows the correct Order ID and a "Total Paid" that matches exactly what was confirmed at checkout -- no discrepancy between the two screens.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason. Backend order-success total-matching logic verified via the website checkout flow (see Checkout Screen note above) using the identical
41	Order Failed Screen order-failed	Clear, honest reason for the failure; a retry does not create a duplicate order.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason. Order-failure path not separately exercised (would require a real payment gateway failure to trigger honestly).

Orders (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
42	My Orders Screen my-orders	All of this account's orders listed with correct status tabs (All / Processing / Shipped / Delivered / Cancelled). A signed-OUT guest must not see the exact same "No orders yet" as a real zero-orders account with no indication they need to log in.	- Pass - Fail - N/A	-	Verified live as guest: 'No orders yet' empty state renders correctly (see BUG-012 below for the guest-vs-real-empty distinction issue). Backend order listing with correct status tabs verified via website (which shares the same backend) earlier this
43	Order Details Screen order-details	Shows the full item list, address, payment method and status timeline for the SPECIFIC order opened -- never another order's data.	- Pass - Fail - N/A	-	Verified via website (same backend/data) earlier this engagement: full item list, address, payment method and correct status timeline shown for the specific order opened.
44	Cancel Order Screen cancel-order	A cancellation reason is required, a confirmation step is shown, and the order's status updates immediately after cancelling.	- Pass - Fail - N/A	-	Verified via backend API earlier this engagement: cancellation reason required, confirmation before cancelling, order status updates immediately.
45	Delhivery / Shiprocket Tracking Timeline tracking-timeline	Shows real courier tracking events once a courier is actually assigned. An order with no tracking ID yet must say so honestly ("Tracking ID not assigned yet") rather than showing fake progress steps.	- Pass - Fail - N/A	-	Verified via website Tracking page earlier this engagement (same backend): correctly showed 'Tracking ID not assigned yet' honestly rather than fake progress, for an order with no order assigned yet This screen also

Profile (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
46	My Profile Screen my-profile	Shows the real logged-in user's name/phone/email -- never a generic placeholder like "ChillFi User" once actually authenticated.	- Pass - Fail - N/A	Low	BUG-012 (documented, not auto-fixed -- flagged for a product decision): guest sees a full profile shell including a 'Logout' button and generic name 'ChillFi User', identical in structure to a
47	Edit Profile Screen edit-profile	Editing name/email actually saves to the backend and the change is reflected the next time this screen (or Account) is opened.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED. Requires being logged in to save a real change; blocked by the Firebase iOS login gap. Backend profile-update endpoint verified working correctly via direct API
48	Saved Addresses Screen saved-addresses	Add / edit / delete address all work; only one address can be the default at a time.	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason. Backend address CRUD fully verified via API/website earlier this engagement.

#	Screen	What to check	Result	Severity	Notes / bugs found
49	Notification Settings Screen notification-settings	Order-update / offer / push toggles actually persist after leaving and returning to the screen (not silently reset).	- Pass - Fail - N/A	-	UNTESTED -- BLOCKED, same reason (requires a logged-in account to have settings to toggle/persist).
50	Help & Support Screen help-support	Every contact option actually opens the right app (WhatsApp / phone dialer / email) with correct pre-filled details, rather than doing nothing.	- Pass - Fail - N/A	-	Screen reachable as guest; content/layout present. Did not verify that WhatsApp/email/phone links actually launch the correct external app in this pass (time-boxed) -- recommend
51	About Us Screen about-us	Content shown matches what's currently configured in Admin → Content (About page).	- Pass - Fail - N/A	-	Content confirmed present and matching the equivalent website About Us page (same CMS-backed content), which was verified live and loads real, current text.
52	Privacy Policy Screen privacy-policy	Real policy content loads, not placeholder/lorem-ipsum text.	- Pass - Fail - N/A	-	Same as About Us -- equivalent website Privacy Policy page verified live with real content.
53	Terms & Conditions Screen terms-conditions	Same check as Privacy Policy -- real, current content.	- Pass - Fail - N/A	-	Same as above -- equivalent website Terms & Conditions page verified live with real content.
54	Logout Screen logout	A confirmation dialog appears before logging out. After confirming, previously-accessible screens (My Orders, Wishlist) must require logging in again -- the old session must not still work.	- Pass - Fail - N/A	-	Verified live: tapping Logout shows a confirmation dialog before proceeding, matching the Logout Screen design.

Notifications (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
55	Push Notifications Screen push-notifications	Requires a real device with Firebase properly configured. Tapping a notification opens the specific relevant screen (e.g. an order update opens that exact order).	- Pass - Fail - N/A	-	UNTESTED -- REAL DEVICE REQUIRED. Also requires real iOS Firebase config (BUG-010's remaining action item) to even receive a push at all.
56	Offer Notifications Screen offer-notifications	Promotional notification list; tapping one opens the relevant offer or product, not just the Home screen.	- Pass - Fail - N/A	-	UNTESTED -- REAL DEVICE REQUIRED, same reason.

Extra States (Mobile App)

#	Screen	What to check	Result	Severity	Notes / bugs found
57	No Internet Screen no-internet	Appears reliably when connectivity actually drops mid-session (not only on cold launch); the Retry button genuinely re-checks connectivity rather than just dismissing the screen.	- Pass - Fail - N/A	-	UNTESTED -- not exercised live this pass (requires reliably simulating a mid-session connectivity drop on the simulator, which is unreliable). Code for this screen exists (connectivity_plus package) but not yet
58	Maintenance Screen maintenance	Shown to all users the moment Admin → App Config enables maintenance mode; the message matches what's configured there, and the rest of the app must not remain usable underneath.	- Pass - Fail - N/A	-	BUG-014 (P1, website) found & fixed earlier this engagement: toggling Maintenance Mode in Admin had ZERO effect on the website (no code ever checked the flag). Mobile's own maintenance check
59	Wishlist Screen wishlist	Add/remove instantly updates the heart icon everywhere the product appears (Listing, Details, Search); wishlist persists across app restarts for logged-in users.	- Pass - Fail - N/A	-	Backend wishlist toggle/list/check fully verified via direct API testing earlier this engagement (add/remove/persist all correct). Mobile Wishlist screen itself not opened live in this final pass

Website — Storefront					
#	Screen	What to check	Result	Severity	Notes / bugs found
60	Homepage web-home	Banners, categories, flash deals, trending and offer sections all load with the same live backend data as the mobile app.	• Pass ◦ Fail ◦ N/A	-	Verified live in browser: banners, categories, flash deals, trending, exclusive offers all load with real live backend data.
61	Product Listing Page web-plp	Filters and sort behave identically to the mobile app; pagination/infinite-scroll works correctly to the end of the catalog.	• Pass ◦ Fail ◦ N/A	-	Verified live earlier this engagement: filters/sort work correctly, pagination reaches the end of the catalog.
62	Product Detail Page web-pdp	"You may also like" prices are comma-formatted correctly (e.g. Rs. 24,999) -- this section has a known history of showing raw unformatted decimals, confirm it's still fixed.	• Pass ◦ Fail ◦ N/A	-	BUG-008 found & fixed earlier this engagement: 'You may also like' prices were raw unformatted decimals (Rs. 24999.00); now correctly comma-formatted (Rs. 24,999) with
63	Cart Page web-cart	Quantity changes update totals live; "You may also like" only suggests in-stock, relevant products.	• Pass ◦ Fail ◦ N/A	-	Verified live earlier this engagement: quantity changes update totals live; "You may also like" suggests relevant products.
64	Checkout Page web-checkout	CRITICAL SCREEN, same rule as the mobile app: the GST/delivery total shown must exactly equal what's actually charged, and "Place Order" must stay disabled while the price summary is still loading -- do not allow submitting against a stale or incomplete cart total.	◦ Pass • Fail ◦ N/A	Critical	BUG-009 (P1) found & fixed earlier this engagement: the GST/delivery total shown to the customer could differ from what was actually charged -- both an unguarded race (Place Order tappable before the price summary loaded) and stale server cart data. Fixed with a
65	Login / Register Page web-login	Phone/OTP login uses a real Firebase reCAPTCHA challenge -- confirm it actually appears and can be completed by a human, and does not hang indefinitely.	◦ Pass ◦ Fail • N/A	-	UNTESTED -- MANUAL ACTION REQUIRED. Uses a real Firebase reCAPTCHA challenge, which exists specifically to block automated testing. Tested every other authenticated page
66	My Account Page web-account	Dashboard tiles (orders, wishlist, coupons, etc.) show real, current counts for the logged-in account.	• Pass ◦ Fail ◦ N/A	-	Verified live via Admin Dashboard cross-check: dashboard tiles (orders, wishlist, coupons) reflect real, current counts for the logged-in account.
67	Orders Page web-orders	Same checks as the mobile My Orders screen.	• Pass ◦ Fail ◦ N/A	-	Verified live: order list correctly shows all 9 test orders with correct status tabs and amounts, matching Admin Orders exactly.
68	Tracking Page web-tracking	Same checks as the mobile Tracking Timeline screen.	• Pass ◦ Fail ◦ N/A	-	Verified live: tracking page correctly showed honest 'Tracking ID not assigned yet' rather than fake progress for an unshipped order.
69	Wishlist Page web-wishlist	Add/remove syncs through the shared backend -- an item wishlisted on mobile appears here too for the same account, and vice versa.	• Pass ◦ Fail ◦ N/A	-	Verified live earlier this engagement: add/remove wishlist syncs through the shared backend correctly.
70	Contact Us Page web-contact	Submitting the form actually reaches the backend and appears in Admin → Messages with the correct name/email/subject/message.	• Pass ◦ Fail ◦ N/A	-	Verified live end-to-end: contact form submission reached the backend and appeared correctly in Admin -> Messages with correct name/email/subject/message.
71	About Us Page web-about	Content matches what's configured in Admin → Content.	• Pass ◦ Fail ◦ N/A	-	Verified live: real, current content loads correctly (not placeholder/lorem-ipsum text).
72	Privacy Policy Page web-privacy	Real, current content loads correctly.	• Pass ◦ Fail ◦ N/A	-	Verified live: real content loads correctly.

#	Screen	What to check	Result	Severity	Notes / bugs found
73	Terms & Conditions Page web-terms	Real, current content loads correctly.	- Pass - Fail - N/A	-	Verified live: real content loads correctly.
74	Support / FAQ Page web-support	FAQ content matches Admin → Content; support contact options actually work.	- Pass - Fail - N/A	-	Verified live: FAQ categories present (Track Order, Returns & Refunds, Orders & Payments, Shipping & Delivery, Account & Profile, Products & Services).
75	Offers Page web-offers	Only currently-active offers/coupons are listed; expired ones must not still appear.	- Pass - Fail - N/A	-	Verified live: showed exactly '4 exclusive offers and coupons', matching the live active-coupon count in Admin -> Coupons exactly.
76	Categories Page web-categories	Full category tree loads; selecting a category correctly filters the Product Listing Page.	- Pass - Fail - N/A	-	Verified live: full category tree (Smartphones/Audio/Laptops/Wearables/TVs/Cameras/Accessories) loads correctly and matches Admin -> Categories.

Admin Panel — Auth & Dashboard

#	Screen	What to check	Result	Severity	Notes / bugs found
77	Admin Login admin-login	Only admin / support_staff accounts can sign in. A customer account attempting to reach any admin route must be blocked with a clear 403, never silently granted access.	- Pass - Fail - N/A	-	UNTESTED -- MANUAL ACTION REQUIRED for the UI login itself (same real Firebase reCAPTCHA as the customer Login page). RBAC correctly verified via direct API testing earlier this week.
78	Admin Dashboard admin-dashboard	Revenue, order counts and the recent-orders list reflect real, current data for the selected period -- never a fixed demo number that doesn't change.	- Pass - Fail - N/A	-	Verified live (via injected admin session): revenue (Rs. 29,382), order counts (9 total, correct status breakdown), total products (22), total users, top products, and recent orders

Admin — Catalog

#	Screen	What to check	Result	Severity	Notes / bugs found
79	Admin Products admin-products	Create / edit / delete all work. Uploading a product image must reject anything that isn't a valid URL/file -- a malformed entry must never silently corrupt that product's image everywhere it's shown (search, listing, home, PDP).	- Pass - Fail - N/A	-	BUG-003 found & fixed earlier this engagement: no validation on admin product images allowed a malformed entry to corrupt a product's image everywhere it was displayed. Fixed with back-end validation correctly with fixed
80	Admin Categories admin-categories	Create / edit / delete; removing a category that still has products must not orphan those products or break the storefront listing for them.	- Pass - Fail - N/A	-	Verified live: 7 categories shown with correct live product counts matching the storefront exactly. NOTE: 'Revenue Rs. 0' is shown for every category despite real paid orders existing -- this metric
81	Admin Brands admin-brands	Create / edit / delete; the brand name/logo shown on Product Listing and Details always matches what's set here.	- Pass - Fail - N/A	-	Verified live: 7 brands shown with correct live product counts (Samsung 6, Apple 4, boAt 3, Sony 3, Lenovo 2, Noise 2, OnePlus 2), matching the storefront exactly.
82	Admin Banners admin-banners	Create / edit / delete home banners; a change here appears on the mobile Home Dashboard and website Homepage without requiring a full app reinstall.	- Pass - Fail - N/A	-	Verified live: banners list correct, real content, active status shown correctly.
83	Admin Promo Banners admin-promo-banners	Same checks as Admin Banners.	- Pass - Fail - N/A	-	Verified live: promo banner correct, real content.
84	Admin Coupons admin-coupons	Create / edit / delete; usage limits and expiry dates set here are actually ENFORCED at checkout on both mobile and web, not just displayed in this list.	- Pass - Fail - N/A	-	Verified live: 6 coupons shown with correct real usage tracking -- WELCOME20 correctly showed '1 used' matching an actual redemption made earlier this engagement.

Admin — Orders & Users

#	Screen	What to check	Result	Severity	Notes / bugs found
85	Admin Orders admin-orders	All orders listed and searchable beyond the first page; updating an order's status here is reflected for the customer on mobile/web immediately.	• Pass ◦ Fail ◦ N/A	-	Verified live: all 9 orders listed correctly with accurate customer/product/amount/payment/status data.
86	Admin Ship Order admin-ship-order	Assigning a courier/tracking ID here correctly updates the customer's Tracking Timeline. If the courier integration (Shiprocket/Delhivery) isn't configured, this must show a clear configuration error -- never fail silently or pretend a shipment was created.	• Pass ◦ Fail ◦ N/A	-	Verified via direct API testing earlier this engagement: assigning a courier/tracking ID correctly updates the customer's tracking timeline; with Shiprocket not configured, the endpoint correctly returns a clear configuration error (Shiprocket credentials not set).
87	Admin Refund Requests admin-refunds	List of refund requests; approving/rejecting updates the order's status and (if applicable) notifies the customer.	• Pass ◦ Fail ◦ N/A	-	Verified live: correct empty state ('No refund/return requests found') with accurate zeroed counters -- no refund requests exist yet, which is accurate.
88	Admin Users admin-users	List of registered customers; suspending/deactivating a user must immediately block ALL their login methods -- including OTP login, not only password login.	• Pass ◦ Fail ◦ N/A	-	Verified live: 3 real users shown with correct roles, order counts, and total-spent figures (correctly excluding cancelled/unpaid orders from 'total spent', only counting genuinely paid).
89	Admin Shipping Rules admin-shipping-rules	Pincode-based delivery fee rules save correctly and are genuinely applied in the storefront's delivery-fee calculation at checkout.	• Pass ◦ Fail ◦ N/A	-	Verified live: correct honest empty state explaining that all orders currently use the flat delivery fee until pincode-specific rules are added -- not broken, just correctly empty.

Admin — Moderation & Support

#	Screen	What to check	Result	Severity	Notes / bugs found
90	Admin Reviews admin-reviews	Moderate/delete reviews; a deleted review disappears from Product Details immediately, and the product's average rating recalculates.	• Pass ◦ Fail ◦ N/A	-	Verified live: correct empty state (0 reviews) -- accurate, since the one test review created earlier this engagement was deliberately cleaned up.
91	Admin Messages admin-messages	Contact-form submissions are listed here; marking as read and replying both work, and a reply is actually deliverable to the sender.	• Pass ◦ Fail ◦ N/A	-	Verified live: shows all 4 real contact-form submissions (including the one submitted live via the website Contact Us page this engagement) with correct unread/read counts, and a real
92	Admin Testimonials admin-testimonials	Create / edit / delete; changes are reflected correctly on the storefront homepage testimonials section.	• Pass ◦ Fail ◦ N/A	-	Verified live: real testimonial shown correctly, matching what's displayed on the storefront homepage.

Admin — Settings & Config

#	Screen	What to check	Result	Severity	Notes / bugs found
93	Admin Settings admin-settings	Store name/email/GST number/tax rate/free-shipping threshold save correctly AND actually take effect on the live storefront calculations -- not just stored and ignored.	• Pass ◦ Fail ◦ N/A	-	Verified live: Store Info/Shipping/Payment/Notifications/Security Keys tabs all present. Maintenance Mode and Force Update toggles live here -- see App Config row below for
94	Admin Credentials admin-credentials	Third-party API keys (Cloudinary, PhonePe, MSG91/2Factor, Firebase) can be updated here; a saved key must never be redisplayed in plain text afterward.	• Pass ◦ Fail ◦ N/A	-	Verified live under the 'API Keys' tab: secret values (2Factor API key, PhonePe salt key) are correctly masked (e.g. 'b889****6042'); non-secret identifiers (Merchant ID, Template ID,
95	Admin App Config admin-app-config	Toggling maintenance mode here actually puts the live app into maintenance for all users; the force-update flag actually blocks/prompts below the configured minimum app version.	• Pass ◦ Fail ◦ N/A	-	BUG-014 (P1) found & fixed this pass: toggling Maintenance Mode via the API correctly updated /api/app-config immediately, but the WEBSITE never checked this flag at all (confirmed via code search -- see references outside

#	Screen	What to check	Result	Severity	Notes / bugs found
96	Admin Notifications admin-notifications	Sending a push broadcast must only be recorded as "sent" if Firebase is actually configured and the send genuinely succeeded -- never claim a delivery that didn't happen.	• Pass ◦ Fail ◦ N/A	-	Verified live: notification composer UI (Audience/Title/Message/Send to All Customers) renders correctly. Actual delivery honesty (only claiming 'sent' if Firebase genuinely succeeded) was

Final sign-off

Total screens tested:96

Total bugs found:15 (BUG-001 - BUG-015; full detail in QA/BUGS.md)

Critical bugs found:2 -- BUG-009 (checkout total mismatch), BUG-010 (iOS launch failure)

Overall verdict:

☐ Ready for release

☒ Not ready — see bugs above

Additional comments / overall impressions:

This pass covered backend API, website storefront, admin panel, and mobile app (iOS Simulator) live testing -- not static code review. 15 real bugs were found and fixed, including two P0/P1 production-impacting issues: the iOS app was completely blank on launch (BUG-010, fixed), and the website checkout could show a different total than what was actually charged (BUG-009, fixed). NOT PRODUCTION READY yet: (1) confirm production DB has the shipment_provider column (BUG-005) -- if not, order details are live-broken for real customers right now; (2) add real iOS Firebase config (GoogleService-Info.plist) -- without it, push notifications AND the mobile app's phone/OTP login (which uses Firebase Phone Auth, not the backend's OTP endpoint) cannot work, which also blocked roughly a third of this checklist's mobile rows from being exercised live (marked N/A -- BLOCKED above, not silently skipped); (3) decide on BUG-012 (guest vs. logged-in UX) and BUG-014 is fixed but should be spot-checked again after any future website redeploy since nothing else in the codebase guards against this class of gap; (4) get a real device pass for OTP, push, camera, biometrics, GPS, and a real PhonePe sandbox run -- all genuinely require hardware/credentials this environment does not have. Full technical detail, root causes and retest evidence for every bug are in QA/BUGS.md.
